## Currencies: Dollar Euro

### CURRENCIES:

The Dollar is still strong against the Yen with a further bull trigger close by. There was some weakness in the Dollar against the Euro late on in the week, but not enough to convince. An uneasy equilibrium was evidenced against the Sterling.

These powerful resistances above the market at 1.15 and above **look to have reversed or at least halted** the bear Dollar/bull Euro market ...

The pressure is on the Euro now. **We favour the Dollar.**

### Dollar Euro weekly spot cash chart

So the support from the Prior Highs looks as if it has failed.

There are wild swings, but on the whole the Dollar looks set to gain strength.

Note though, the FAILED break beneath 1.1297 beginning the next leg down (strengthening Dollar).

Wait for a break

### Dollar Euro spot cash chart daily chart...

Short-term, the momentum is **unclear**.

Note the break of the diagonal downtrend resistance and the re-testing of the horizontal resistance.

This bounce back above the Prior Low was disappointing for the Dollar bulls....

All the Prior Pivotal lows of 1993, 2001, 2008 and 2016 have acted as good resistance. A massive Multiple Top has formed.

**The market rallied back deep into the band of resistance as far as the 50% Fibonacci resistance – but failed there.**

Look more closely.

### Dollar Sterling Monthly spot cash LINE CHART based on closes

Note here the repeated testing of the resistance band formed from low closes.

It's a clear failure...

Add to the Dollar (sell the Yen) on a break up through the 114.54 level.

Wait for the break.

### STOCKS:

The S&P still swings wildly within the long-established (over 2018) trading range. There is some slight short-term evidence of consolidation in the EuroStoxx that might in due course allow a bull retracement, which chimes with the longer-term underpinnings in the FTSE and Nikkei but watch our levels closely.

### IMPLIED ASSET ALLOCATION

### CME S&P 500 cont weekly cont. chart

The pull-back to test the Prior High at 2879 smashed it.

Now the test of the 2016 trend line support is nigh.

If that broke **it would be very bearish**, though a confirming close beneath that diagonal would be more convincing.

### CME S&P 500 daily Dec 2018 chart

There is a wide trading range in play (that is, 2900-2600).

(It was tempting to look for a bull H&S pattern in the middle of the range, but the price action makes that look doubtful...)

Stand back.

The long-term condition of the market is not clear:

The market has failed to push through the old 3769 High and remains looking vulnerable.

But as yet there is no break beneath the Prior Low of 3172.

### Eurex EuroStoxx 50 weekly continuation futures chart

Is this a Double Top - no completion yet.

If it does convincingly get beneath 3172 then look for a minimum move down to the lows of 2018 at 2645.

Watch and wait.

The succession of Prior Highs (6796, 6995) has been overcome, so the market remains underpinned in a very powerfully bullish way.

Note that the one retest of that support led to a rapid bounce.

Will the market bounce from the same level?

Watch the Prior Low.

A break of 6766 would suggest a break of the very long-term chart...

### BONDS:

US bonds have rallied ( retraced) to a Prior High Pivot that should be closely watched. There are interesting levels in the very short-term Bunds and ( to a lesser extent) the Gilts too. The Bund is altogether less bearish than the US, so the tension between the two is fascinating.
