CURRENCIES:

Ok so the Dollar has strengthened further against the Euro, but it the Euro isn't a compelling sell yet. And the Sterling is even less of a sell since it has bounced perkily with no supports of substance broken at all. The Yen is very weak though, and could still weaken a good deal further as it is adrift within a wide trading range. Note then the continued strength of the Sterling against the Euro. Looks to us as if it wants to go further.

These powerful resistances above the market at 1.15 have been deeply penetrated. The market has nearly broken free of them....

The **break of the 2007 downtrend** confirmed the weak Dollar trend ...

If 1.25 is taken out might there be a Double Bottom in place driving the Dollar still?

The Prior High supports 1.2011 HAVE BEEN BROKEN.

This is a significant breakdown, with next support at 1.1492.

Dollar Euro spot cash chart daily chart...

We said that 'the band of support 1.2011, 1.1965 etc are important and should hold for the bulls to remain optimistic short-term.'

Now they are broken
The market is vulnerable to further sell-offs.

Dollar Sterling Monthly spot cash chart

All the Prior Pivotal lows of 1993, 2001, 2008 and 2016 have formed a bearish long term Multiple Top but the sideways price action beneath 1.35 has now broken the diagonal downtrend resistance

Note that the horizontal resistances are being penetrated (almost breached) by the market.

Dollar Sterling Monthly spot cash LINE CHART based on closes

Note that this chart shows

- the simultaneous completion of the BULL H&S reversal pattern
- and the breaking of the DIAGONAL downtrend resistance...

That is bullish for Sterling. The minimum move suggested is up to the 1.42 Prior High and Horizontal resistance and note well that a break of 1.42 would complete a Double Bottom reversal and send the market higher still.

For the moment the market is retreating from the Prior high at 1.4344. Watch the horizontal support at 1.3498 (and above that the rising diagonal support)

Dollar Sterling daily spot cash chart

The bull trend still looks well-constructed, despite the short-term dither, the support from the Prior High of 1.3758 looks solid.

But note that coincidence of support - watch carefully to see if that holds on nay further drift.

Eurex EuroStoxx 50 monthly continuation futures chart

The triple failure of the market at 3700 is the dominant issue.

The market looks set to break out. (but see the weekly chart below)

A break of that would established very powerful support beneath the market and so set up the next bull leg.

On the other hand a failure here would be a multiple failure.

Watch and wait.

Eurex EuroStoxx 50 weekly continuation futures chart

The push above the Prior High 3394 looks important. It's now good support.

Note the bounce from that level.

Note too the weekly Key Reversal of last week.

The market looks underpinned and well-set to go better still and test the Prior High at 3868.

Will the pause at the Prior High resolve itself into

- a reversal pattern or
- a continuation pattern?

It's not clear yet. But the failure at the Prior Highs and the pull-back says that the bears look to be winning the argument.,

Nymex Gold weekly

The influence of the weekly bear Key Reversal is important.

Against that, the market is penetrating the band of support from Prior Highs, the importance of which has already been demonstrated in the earlier bounce in November.

All told, we think that the Key Reversal has yet to take effect on the market and that a further breakdown beneath the band of support is likely.
