## Currencies: Dollar Euro

### CURRENCIES:

We have been wrong: the Dollar wants to weaken further across the board. How much further is difficult to see. We note in particular the massive resistances above the market in the Monthly chart of the Dollar Euro – but the headroom there still allows for a surge to 1.07 or thereabouts. Similarly the Cable has some headroom before running into long-term resistance.

### Dollar Euro monthly spot cash chart

These powerful horizontal resistances have repelled the Euro bulls

Now the market has broken beneath the band 1.0339 - 1.1095 and at the same time has broken down beneath the upwards sloping bull channel

...

This is a major breakdown with very powerful resistance above at 1.04.

There's further to go.

### Dollar Euro weekly spot cash chart

This well-established bear trend is under threat: The break up through 0.9950 + the diagonal, halted at the Prior Low 1.0348 and then broke up through.....

It looks like the market wants to go further...

This suggests that the rally is rather more powerful.

The volatility has forced a break up through the Prior Lows ( including the horizontal resistance at 1.1757) is impressive,

Now we have a second confirming close above 1.1757.

### Dollar Sterling daily spot cash chart

Short-term, the market has **smashed** the band 1.17-1.19 which was critical resistance.

SO bulls should recognise that there is more to come.

### Eurex EuroStoxx 50 monthly continuation futures chart

The market had clearly **smashed** the **VERY LONG-TERM SUPPORT** from a succession of Prior Highs.

**The successive closes beneath that band of support are convincingly LONG-TERM bearish.**

**But what of the rally? There are two days to go before the end of the month.**

### Eurex EuroStoxx 50 weekly cont. futures chart

But for the moment the market remains within a range and beneath resistance.

There was no sustained bear completion break beneath 3380 and the rally since has yet to clearly break the range.

Stand back and watch the test of the top of the range – the band 3944-3995.

The market has FAILED TO get above the Prior Highs – resulting in a **Monthly Key Reversal in June**.

But there has been no compelling breakdown through the band of support from Prior Highs.

Look closer.

### Liffe FTSE 100 Weekly Dec 22 futures chart

The market has been trying to breakdown out of the wide trading range.

The market has **repeatedly** bounced off the first horizontal support of consequence 6900

### Nikkei 225 chart (Quarterly)

The market has completed a complex but identifiable long run bull reversal pattern driving the market up to 40000 or so (measured on a linear chart.)

The support lies beneath at the Neckline at around 25,000.

In the long term it looks strong and resilient....

This is interesting – the move to the 2.0890 level is to a place of good resistance to higher yields – where the market has failed before (in 2013)
